Additional Project Information

Hi, thank you for your patience.

I've finalized the detailed project plan with milestones and the component list. It took me time because I wanted to carefully research and select the right components that will work for the entire project. This way, we won't need to make changes later.

The listed components will be used from milestone one through to the final product. The list covers one complete unit. Some key parts, like the microcontroller, are included in extra quantities to support future adjustments. I also tried to keep the costs as low as possible, but since we are ordering two units, the total may be slightly higher than expected. The main cost drivers are the MPPT solar charger, battery, and solar system. I chose reliable parts instead of cheaper but less dependable options.

If you'd like, I can place the order on your behalf. I already have everything ready. I also created a bill of materials for documentation.

I want to clarify something about pricing. The original quote was only for assembling the circuit on a breadboard or a simple PCB with basic connections. If you want a more complete and professional build—ready to install inside a waterproof enclosure with proper wiring, battery level display, power button, and an LDR for automation—that requires additional work.

For this, I will charge $15/hour. Completing these enhancements will take around two days, so about $150 total. This includes:

-Full enclosure assembly with waterproofing
-Battery level indicator on the outside of the box
-Power switch integration
-LDR sensor for light-based control
-Deep sleep mode for power optimization
-Testing in real conditions (battery lifespan, charging efficiency, etc.)

If you prefer, I can also deliver the raw version as originally planned (breadboard assembly, no enclosure, no extra features). The choice is yours, and I'm fine with either approach.

For the next milestone (IoT integration), we can discuss details once this stage is complete. If you approve the customization, I'll proceed with the detailed build. Otherwise, I'll stick to the base plan. In both cases, the base milestone one price on Fiverr stays the same.
Any additional work in the future will also be charged at $15/hour, but nothing beyond that.
Thank you again. I'm confident you'll be happy with the results.
